Cervical Collar

A cervical collar is used to support the spinal cord and head. Used to realign the spinal cord and relieve pain. Used after cervical spinal surgery and for strains or sprains in the neck.

Pediatric Cervical Collar

Same as a Cervical Collar, but made for young kids.

Miami J Collar

A superior immobilizer to meet the specialized needs of cervical injuries, has padding and air vents for comfort.

CTO

The Cervical Thoracic Orthosis provides immobilization of cervical and upper thoracic spine. Used when more support is needed than the cervical collar provides.

Knight-Taylor Hyperextension

The Knight-Taylor Hyperextension brace has a posterior frame with corset front and shoulder straps used for compression fractures of thoracic to lumbar spine.

Chair Back Spinal Brace

The Chair Back is a lightweight spinal orthosis that helps keep the spine in neutral alignment and allows for ease of movement. Used for low back pain and degenerative disc disease.

Jewett Hyperextension

The Jewett Hyperextension brace is a three point pressure extension brace used for stabilization and compression fracture of spine.

CASH Hyperextension

The Cash Hyperextension back brace is a rigid, aluminum, cross shaped orthosis which prevents flexion. Used to treat kyphosis, anterior compression fractures and osteoporosis.

Boston Scoliosis Brace

The Boston Scoliosis Brace is used for management of idiopathic scoliosis. Generally worn 18-24 hours per day.

Anterior Overlap LSO

The LSO is a custom fit brace that is a one piece body jacket, anterior opening made of semi-rigid plastic. Used for compression fractures, disc disease, spondylolisthesis, acute lower back pain and post-op immobilization.

Providence Scoliosis Brace

The Scoliosis Brace extends from below the hips to just below the shoulder. It is used to aggressively correct scoliosis only while the patient sleeps.

Bivalve LSO

The Bivalve LSO is a custom fit brace that is of clamshell design with anterior and posterior halves. Used for compression fractures, disc disease, and post-op immobilization.

Bivalve TLSO

The Bivalve TLSO is a one piece custom fit brace. Used for compression fractures, disc disease, kyphosis, some scoliosis, and post-op immobilization.

LSO With Hip Extension

The LSO with hip extension is used for post-op lumbar sacral or for dislocated hip. Can be locked in any desired position.

TLSO With Thoracic Extension

The TLSO with thoracic extension allows infinite adjustability and maximum compression. Used for post-op control.

KAFO

Encompasses the foot, ankle, lower leg, knee and thigh. It provides all the features of an AFO but in addition provides protection, correction and support of the knee.

Solid Ankle AFO

The Solid Ankle AFO is used to maximize the support of the leg in instance of ankle and knee weakness, decrease pain, chronic arthritis, and management of drop foot.

AFO Dorsiflexion Assist

Flexible plastic ankle foot orthosis to manage drop foot.

Articulating AFO

The Articulating AFO offers medial lateral ankle control and may limit dorsiflexion of the ankle.

Arizona AFO

The Arizona AFO is used for the treatment of posterior tibial tendon dysfunction (PTTD) that fits into a shoe and stabilizes the ankle area. It relieves pain of the foot and ankle and increases mobility.
